(available black stained)

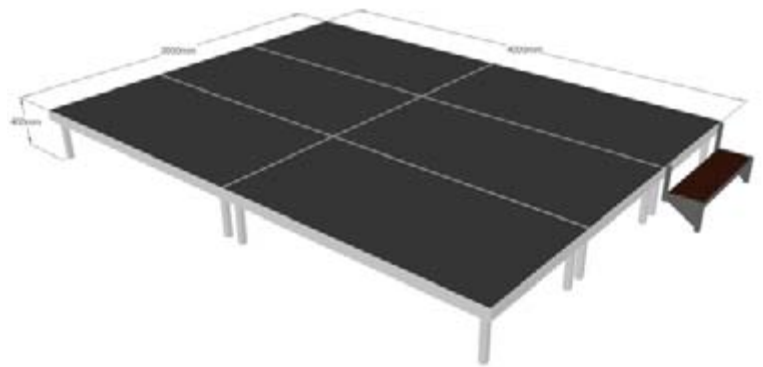

Example stage configurations

Multiple stage units are connected with Klemmfix connectors and clamps to build a stage size for your requirements. Stage legs slot easily into base units and are secured with wing nuts.

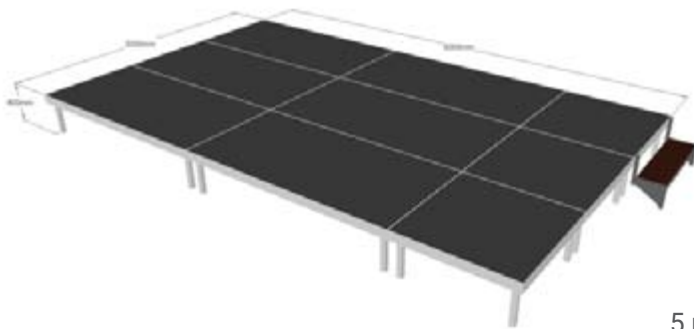

4 m x 3 m stage using 12 of 1 x 1 m stage units and a step

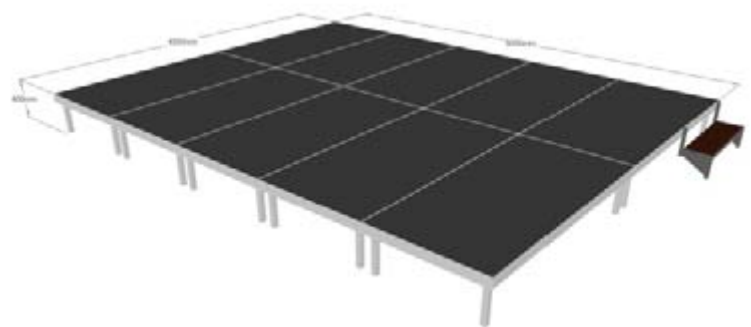

4 m x 3 m stage using 6 of 2 x 1 m stage units and a step

5 m x 3 m stage using 6 of 2 x 2 m stage units & 3 of 1 x 1 m stage units and a step

5 m x 4 m stage using 10 of 2 x 1 m stage units and a step

Handrails & steps

Handrails, steps and chair borders ensure the safety of your guest speakers and attendees while they are on the stage.

Standard handrail

Standard infilled handrail

Heavy duty infilled handrail

Standard steps

Box style steps

Step balustrade

Timber steps

Timber balustrade

Chair border

Stage skirting

Stage skirting is made to measure with accordion pleats as standard (other options are available). There is a choice of fabrics including fire retardant fabric. Stage skirting attaches to the stage with hook & loop tape (Velcro).

Curtain & backdrop systems

Backdrop systems can be added to your stage units for branding or scenery. Skirting, backdrops and valances attach using velcro tape. This makes them easy to remove at the end of the event.

Designed as a stage curtain for performances, the curtain system attaches to the stage. It folds in half so a curtain can be easily added.

Backdrop systems

Curtain systems

Storage & accessibility

Portable stages can be packed up after use and stored on a trolley. Legs and tools can be stored in the base stage units. Using the storage system, the stage units can be converted into a trolley.

Bracing (Alu Quick)

Adjustable height legs

Custom built staging

Custom built staging is developed in collaboration with the venue.

A project team which can include the architect or venue manager will work with one of our project managers to specify the entire build.
